

Exercise 4 – Images

Objective

- To insert multiple images into an HTML page
- Wrap text around images
- Use a background image

Overview

In this exercise you are going to produce the team page for our training organisation.

Technical IT

Adrian Jakeman

Adrian has worked in the IT and education industries for the past 25 years and joined QA in 2006 with a focus on the development and delivery of training around Visual Studio, Team Foundation Server and the software development lifecycle. Still to be found in the classroom delivering training around Application Lifecycle Management, he is also responsible for the day-to-day management of QA's IT curriculum. He has particular focus on the quality, breadth, depth and relevance of both vendor-produced courses and the extensive QA-authored portfolio. Areas of expertise: Teaching and learning effectiveness, Application Lifecycle Management, Cloud computing, Team Foundation Server.

David Walker

David is a change driven technologist who continually looks to adapt and expand his knowledge and understanding of his field. Over the last eighteen years David has led technology and training companies through emerging fields and technology trends helping them to understand the future and develop business opportunities. As Head of Emerging Technologies he works closely with customers and industry experts to ensure the opportunities and threats of new technology trends designing custom learning solutions to help small and enterprise organisations adapt and make the most of their people - ensuring QA is ready when our customers need to navigate the minefield of the fast moving digital landscape. His passion is in advanced web engineering principals and vendor neutral thick client design development technologies reflected in his research, analysis and courseware development experience combined with his training delivery skills. As a technologist he is the lead instructor and syllabus author for web development technologies and specialising in Agile, DevOps, and User Experience driven approaches to developing solutions. He has authored courses such as HTML5, Responsive Web Development, User Experience, NodeJS, Javascript and jQuery.

Laurence Sharp

Having been a chartered surveyor with computing as a hobby, Laurence made a midlife career choice and joined QA in 1994. Originally specialising in desktop applications and end user training he is now a principal consultant in the internet and web technologies area and has been the lead trainer on several key projects with responsibility for overall training design and delivery. As well as delivering courses in most of the web technologies he has also developed several of the QA authored technical and client specific courses. Laurence is constantly researching and exploring the exciting technologies that are appearing in the internet and web development solution area and gets a lot of satisfaction in passing this new information on to our delegates.

Phil Stirpe

Philip is a Microsoft Certified Trainer - MCT based in the North-West, and has been involved in software development and IT training for over 26 years. Philip is actively involved in vendor relationships. He has delivered Visual Studio, .NET, Silverlight, WPF and LIVE training courses on behalf of Microsoft worldwide and recently developed and delivered a wide portfolio of AWS training with Amazon Web Services. His areas of interest include Visual Studio, .NET, Amazon Web Services - AWS, Web Application Security, DevOps and Configuration Management, Scrum and Agile Software Development. Philip is currently involved in developing QA's Agile curriculum across all of its practices as well as developing QA's Configuration Management portfolio with courses in tools including Chef and Puppet. He is passionate about developing and delivering training that meets the needs of the client and exceeds their expectations. Philip has also pioneered various techniques and tools to help other trainers in QA to develop including the use of video and audio recording at QA in order to produce Train the Trainer material for each of his courses. In addition, he introduced a Bitsize programme where trainers deliver short briefings to colleagues after class in order to help share skills. Philip develops a great number of QA authored courses. Recent courses include ASP.NET MVC, OWASP for Java, Puppet and Chef.

Activity

The first step in our journey here is to create our landing page. Because we want focus on consolidating the learning we've done so far we're going to use some pre-existing templates.

Creating the page

1. Create a new HTML page called team.html in the Starter folder.
2. Grab the content from team.txt and paste into the body of your new page.
3. Replace each <!--photo--> comment with the necessary HTML code to insert that person's picture (found in the images folder)
4. Remember that each and every image should have an 'alt' attribute which provides a meaningful description should the image not be displayed.

Positioning

Up until now our HTML has followed the document flow, but now we want our images to appear next to the corresponding text.

1. Use float to position the images to the left and allow the text to flow around it.
2. Use clear to ensure the <hr> elements do not wrap around

Background Image

1. Add a header element to the top of the page and place the h1 element inside it
2. Add logo.png above the h1 element
3. Set the background image of the h1 element to theTeam.jpg

You'll note the background image does not have any impact on the size of the h1 element. To tidy things up a bit, adjust the h1 element so it looks like this:

```
<h1 style="background-image:url(images/theTeam.jpg); padding: 4em 1em; color: white">Meet the Team</h1>
```
